

Barclays Virtual Taster Course: Data Analytics

Digital Workbook

Virtual Taster Course: Data Analytics Workbook

Brief

Now that you've read over the supporting materials, have a go at the following questions. Good luck!

1. Which was the busiest period/which saw the most incidents?

In the month of July 2022, the busiest period was between 18th and 20th July, where a total of 6 incidents were recorded. In a wider sense, between 18th and 22nd July 2022, a total of 11 incidents were raised, making this the overall busiest stretch of the period.

2. Which category of incidents had the highest volume?

Call Quality incidents had the highest volume, occurring 5 times across the dataset. This made it the most frequently reported category of issue during the period.

3. Were there any repeat offenders (agents reporting incidents more than once?)

Yes, there were two repeat callers identified in the dataset:

Zara Khan - reported 2 incidents: one for Call Quality and one for System Crash.

Isaac Cohen - reported 3 incidents: two for Distorted Audio and one for System Crash.

Using the raw data, we would like you to create a stacked bar chart showing the volume and type of incidents per location.

Please create your stacked bar chart in a separate document and **upload in the submissions section**.

I have created a stacked bar chart showing the volume and type of incidents per location. The chart has been uploaded as a separate document in the submissions section.
